MEMORANDUM FOR: Deputy Director of Information Technology

FROM: [REDACTED]

Deputy Director of Information Resources

SUBJECT: Requirement for FBIS/JPRS Traffic

REFERENCE: Memo for C/ADD/FBIS, D/CSPO/OIT, C/NSEG/OIT,
and C/CED/OIT fm D/OIR, dtd 6 Apr 87, Subject:
Requirement for DI Access to FBIS Products

1. The requirement for incorporating the full range of FBIS and JPRS products into the Directorate of Intelligence (DI) analysts' text handling environment is still valid. We request the Office of Information Technology to advise us on the storage and performance implications of moving in this direction, or to bring feasible alternatives, other than those laid out below, to our attention.

2. DI analysts currently have access within SAFE to all or almost all foreign press items translated by FBIS for inclusion in the Country Daily Books. This is the most important FBIS source for our analysts, and having this information in SAFE has been a major improvement to productivity within the DI. Country Daily Book coverage has been the easiest to acquire as it arrives in this area from overseas Press Monitoring Units electronically.

3. The additional sources are:

- JPRS translation books, available on a variety of topics and regions, appearing on a frequent but irregular basis, not time sensitive, with an annual volume roughly three times that of the Country Daily Books.
- FBIS Trends, Foreign Press Notes, and Special Memoranda, all appearing on a frequent but irregular basis, ranging from one to a few pages in length, comprising FBIS analysis of open source reporting, and roughly akin to the DI's finished intelligence in nature, with a low overall volume.
- FBIS Science and Technology Perspectives, appearing monthly, running about 20-30 pages per issue.

4. [REDACTED] Chief of our Planning and Development Division, is the OIR point of contact. She can be reached on extension [REDACTED]

MEMORANDUM FOR: Deputy Director of Information Technology

FROM: [REDACTED]

Deputy Director of Information Resources

SUBJECT: USERID Labeling Requirement

1. The Directorate of Intelligence requests that the USERIDs for all covert and contract personnel be identified by a special indicator. Currently, the "C" indicator for covert personnel is optional. Perhaps a "Y" indicator can be used for identifying contract personnel.

2. This will provide users of the central computing systems, most notably AIM, a facility to protect both their colleagues' confidential relationship with this Agency, and the Nocontract and/or Proprietary information which comes into their electronic possession.

3. [REDACTED] Chief of our Planning and Development Division, is the OIR point of contact. She can be reached on extension [REDACTED]

MEMORANDUM FOR: Deputy Director of Information Resources

FROM:

Deputy Director of Information Technology

SUBJECT: USERID Labeling Requirement

REFERENCE: Your Memo, dtd 27 Jan 88, Same Subject

1. The AIM Directory currently has the ability to denote contractors (Y) and covert (C) personnel. This notation is useful when it appears in AIM documents because it flags cover status and contractors for the persons creating or reading the document and allows them to be sensitive to this fact when considering document distribution.

3. It would take approximately two months to identify contractors and reflect their status in the AIM Directory. Any further correspondence should be directed to the Systems Administration Branch, CSG/OIT.
